

Tile and Grout Cleaning

Dirt trapped in the pores of your tiles and grout can cause your surfaces to look dark and dirty and can be impossible to remove with traditional cleaning methods.

Electrodry Tile and Grout Cleaning offers an effective no hassle solution that will revitalise your floors. The Electrodry cleaning systems will safely remove built up dirt and grime returning your tile and grout surfaces to like-new condition, saving you valuable time and money.

The Electrodry Cleaning System

1

Pre-Treat Tile and Grout

We apply an alkaline based degreasing solution and then allow it to dwell and penetrate for upwards of 20 minutes. This process loosens accumulated soil, grease, contaminants and topical residues.

2

Power Scrub Surfaces

We use special surrogated brushes that agitate the grout lines as well as the tile surface. At this time we focus on edges and baseboards, making sure they will be just as clean as the middle of the floor!

3

Extract / Turbo Power Rinse

In this step, the tile and grout are extracted or pressure rinsed using high pressure heated water. All water, cleaning solutions and contaminants are captured and extracted away in one process. The system is completely fluid controlled with no over-wetting of any other surfaces or areas.

4

Speed Dry

We remove any remaining water on the floor and place our high powered fans to dry the tile and grout lines.

The Results

Your tiles will be cleaned and grout restored to its original colour. Say goodbye to dirty, unearthy grout lines and bring your tiles back to new with Electrodry. The results will amaze you, we guarantee it!
