

# BEFORE & AFTER

## UPHOLSTERY CLEANING

Our technicians will firstly pre-inspect your upholstery, performing a colour-fastness test to ensure it is safe to clean. They will then treat your fabric using our dry cleaning solutions to help breakdown the build up of oil and soils. We then apply a specialised upholstery cleaning pre-spray that will enable the removal of the dirt and soils in the cleaning process. This pre-spray contains Healthguard to also remove germs, fungi and bacteria during the cleaning process.
